## Palm Oil Discounts Evaporate as Prices Rise

### Discounts for Palm Oil Relative to Soybean and Sunflowerseed Oil

Source: Oilworld and International Grains Council

Over the last half of 2021, discounts for palm oil nearly evaporated and currently reside at 2 percent below soybean oil and 8 percent below sunflowerseed oil. This compares to average discounts of 12 percent for soybean and 21 percent for sunflowerseed oil over the previous 10 years. While the current minimal discounts are not unprecedented, they are still rare and reflect both strong demand for and reduced availability of palm oil.

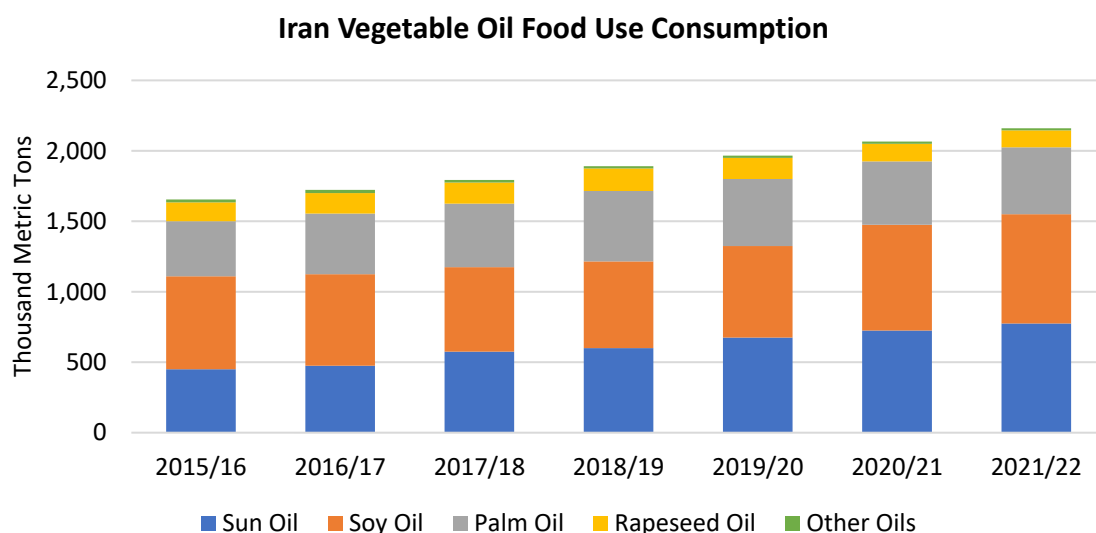

While prices for all major vegetable oils (soybean, sunflowerseed, rapeseed, and palm) have roughly doubled over the past 18 months, gains in palm oil have exceeded those of other oils. Comparing FOB price quotes of palm olein RBD Malaysia, Argentina soybean oil, and EU rapeseed and sunflowerseed oil, palm oil has risen 120 percent over the period compared to 118 percent for rapeseed oil, 105 percent for soybean oil, and 75 percent for sunflowerseed oil. This stronger rise in palm oil prices, coupled with the overall higher price levels, are behind the resultant smaller percentage discounts for palm oil.

Palm oil is traditionally sold at a discount to other major oils and is the oil of choice for many lower income and bargain buyers. With the dramatic increase in prices of all vegetable oils, buyers have moved away from the premium-priced oils to palm, adding to demand pressure. However, slow-to-negative growth in palm oil production in Malaysia and Indonesia, a result of weather issues and labor shortages linked in part to the COVID pandemic, has tightened available supplies and contributed to the relatively high rise in palm oil prices and declining discounts vis-à-vis other oils.

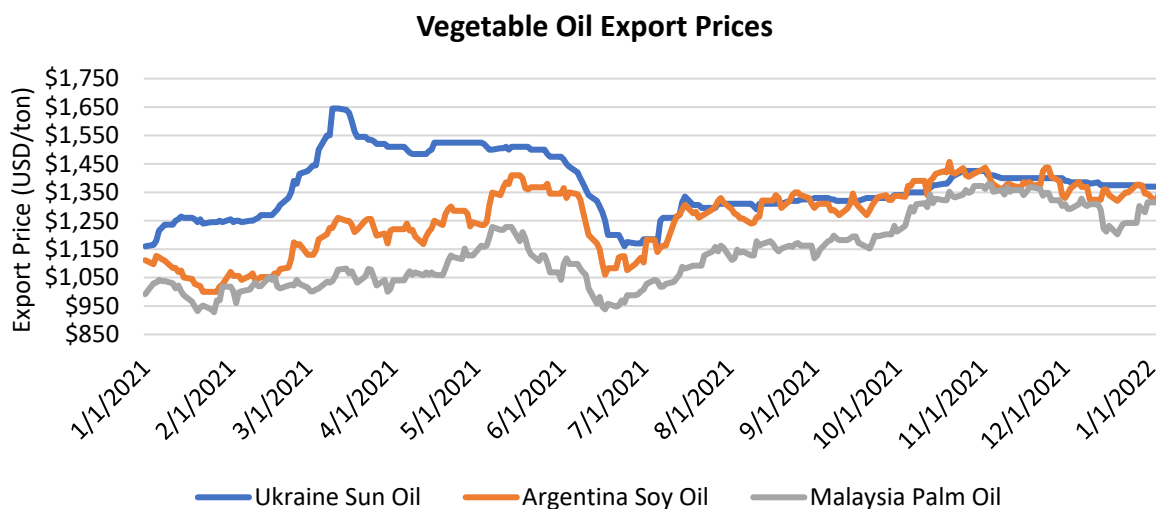

The outlook for 2022 is for a continuation of the current situation with the major oils converging in price as discounts and premiums between them remain near minimums. This, along with continued high prices for vegetable oils, will influence purchase decisions in the coming year.

## MARKET FEATURE

### Iran Sunflowerseed Oil Share of Food Use Forecast at a Record

In 2021/22, Iran sunflowerseed oil food use is forecast at a record volume at 775,000 tons and a record share of total vegetable oil consumption at 36 percent. If realized, sunflowerseed oil will have grown its share of total oil consumption in Iran in 10 of the past 11 years. If this trend continues, sunflowerseed oil will eclipse soy oil as the most consumed edible oil in Iran within 2 years.

*Source: International Grains Council*

Iran sunflowerseed oil imports through the first 9 months of 2020/21 have already reached a record, marking the sixth consecutive year of sunflowerseed oil import growth. The rising trend in sunflowerseed oil consumption is due to both consumer preferences and increased supplies from Russia and Ukraine. Additionally, exports have been boosted in the near-term by evaporating premiums for sunflowerseed oil over both soybean and palm oil. With shrinking premiums and sustained demand growth, Iran sunflowerseed oil imports are forecast to grow 16 percent in 2020/21.

## PROJECTION FOR 2021/22

Global oilseed and product forecasts are down across the board this month as dry weather in South America significantly reduces soybean yield and production. Global 2021/22 oilseed production is down more than 1 percent on lower soybean production in Brazil, Argentina, and Paraguay, more than offsetting gains in India rapeseed and U.S. soybeans. Global crush is down slightly as lower South America soybean processing is partially offset by higher India rapeseed crush. Trade is down on lower soybean exports from Paraguay to Argentina and Brazil, as well as lower exports from South America to other major import markets like Egypt and Turkey. Global ending stocks are down 6 percent on smaller soybean carryout in Brazil and Argentina.

Global production of protein meal is forecast down in tandem with crush. Protein meal trade is down slightly, primarily on lower Argentina, U.S., and Paraguay soybean meal exports, more than offsetting higher India rapeseed meal exports. Protein meal consumption is down marginally on lower global soybean and cottonseed meal use partially offset by higher rapeseed meal consumption. Global ending stocks are down 3 percent on smaller soybean carryout in Brazil and Argentina. Global vegetable oil production is down primarily on lower Malaysia palm oil production, with lower soybean oil and higher rapeseed oil production mostly offsetting. Trade is down largely on lower Malaysia palm oil exports, and global consumption is down slightly due to lower palm oil imports and use in India, the European Union, and Iran more than offsetting gains in India rapeseed oil consumption. Ending stocks are down on lower global palm oil and Russia sunflowerseed oil carryout more than offsetting higher South America soybean oil and Iran sunflowerseed oil stocks. The projected U.S. season-average farm price for soybeans is up 50 cents to \$12.60 per bushel.

## EXPORT PRICES

December prices for U.S. soybeans were up on unfavorable South American weather. However, a slower export pace from the United States helped to reign in price increases. Argentine and Brazilian soybean prices were also up on tightening supplies and reluctant farmer selling in Argentina. Price gains in Brazil were less than the others as its harvest approaches.

Prices for soybean meal were up in December reflecting higher soybean prices.

Soybean oil prices continued to decline from November as high global oil prices restricted demand. Prices reached a minimum in mid-December and have since trended higher into early January 2022. Palm oil prices have been rising in recent weeks on supply constraints in Malaysia and Indonesia where weather has been an issue. Weather problems in South America have also underpinned a rise in soybean prices and, subsequently, soybean oil. Demand continues to be strong, supporting prices.
